

MetaRenew

MetaRenew is a company designed to research and develop tools and technologies for next generations crypto power needs. Our systems plan to solve many of the issues with cryptos power and networking systems with the idea of using sustainable systems like solar and wind. MetaRenew does Not plan to compete with non-renewable or grid systems but to work with them to make a decentralized capable and redundant system for crypto based systems

MetaRenew Coin

MetaRenew Coin is one of many foundational pillars that give MetaRenew the power to create and advance as a business. The coin itself is intended for investing in the company and for spending on products created and listed by the MetaRenew company.

Vision

Our vision is to support the already developed and growing networks and crypto based systems. We can create deployable equipment capable of supporting, expanding and powering crypto networks. We want to create a streamline of products for purchase that can power small miners and LoRaWan devices that can be placed anywhere without grid power or just to create a redundant network capable of sending and receiving data even when power is limited.

Road Map

- Develop and launch MetaRenew coin
- Develop website
- Research and develop prototype deployable
- Develop video with working prototype proof of concept
- Quality check and review
- Start manufacturing and prep for sale and shipping
- Begin sales and shipping
